How to Capture LOV Event in OAF

```java
if (pageContext.isLovEvent())
  {
                  System.out.println("Inside LOV Event");
                  String lovInputSourceId = pageContext.getLovInputSourceId();
              //checking which lov event is fired.
              //Below EmployeeLovInput is the ID of messageLovInput
                if ("EmployeeLovInput".equals(lovInputSourceId))
                  {
                   //Invokes AM Method
                     am.invokeMethod("setExtraInfo");
                  }
  }
```
