

VO Row Iterator in Oaf

```
//Create a object with name PayGrpGroupVO for the ViewInstance PayGrpGroupVO1
OAApplicationModule am = oapagecontext.getApplicationModule(oawebbean);

OADBTransaction oadbtransaction = am.getOADBTransaction();

OAViewObject PayGrpGroupVO =
(OAViewObject)am.findViewObject("PayGrpGroupVO1");

if (PayGrpGroupVO!= null) //Check for null
    PayGrpGroupVO.reset();    //It will take you to the first row of Vo

while (PayGrpGroupVO.hasNext())
{
    OARow PayGrpGroupVORow = (OARow)PayGrpGroupVO. next ();

    //now we can use PayGrpGroupVORow.getAttributes,
PayGrpGroupVORow.setAttributes

    //for implementing our logic as shown below

    String
PayGroupCodeFormValue=(String)PayGrpGroupVORow.getAttribute("DisplayedField ");

    PayGrpGroupVORow.setAttribute("DisplayedField","BIP");
}
```
